

First Response Australia

Product Information

CPR AIRWAY KIT *with ResQPOD & CardioPump*

This unique kit incorporates the latest innovation in advanced airway management and circulatory enhancement.

Included in the kit are:

- 2 X i-gel airways (size 3 & 4)
- 1 X ResQPOD
- 1 X CardioPump
- 1 X Adult Bag Valve Mask
- 1 X Lubricant & Ribbon

The new innovative I-GEL allows responders to secure an airway reliably with 6 seconds. The i-gel airway is a novel and innovative supraglottic airway management device, made of a medical grade thermoplastic elastomer, which is soft, gel-like and transparent.

The ResQPOD is an impedance threshold device that prevents unnecessary air from entering the chest during CPR. As the chest wall recoils, the vacuum in the thorax is greater. This enhanced vacuum pulls more blood back to the heart, doubling the blood flow during CPR.

The CardioPump further enhances the vacuum created on the decompression phase of CPR by actively increasing the thoracic expansion of the chest thereby increasing the amount of blood returning to the heart and increasing output.

Coupled together, the ResQPOD and CardioPump is able to deliver near normal blood flow and systolic blood pressure during CPR
