Product

T-POD *Trauma Pelvic Orthotic Device*

This new device offers complete, safe stabilisation and circumferential compression of the pelvic region and is quickly and easily achieved in a few short steps

The T-POD's tremendous, proven performance and efficacy results from its simultaneous Circumferential Compression and Mechanical Advantage features.

The T-POD is one of the most important advances in pre hospital trauma care and emergency care for open book pelvic fractures. The T-POD is the only product that provides safe, powerful and quick simultaneous circumferential compression of the pelvic ring. It is also effective in reducing pain that is associated with pelvic fracture treatment. The T-POD utilises Mechanical Advantage thus providing compression so powerful and secure that it can replace expensive and cumbersome external fixation as a bridge to definitive treatment.

A high percentage of motor vehicle fatalities are the result of internal bleeding due to pelvic fractures

The T-POD for pelvic trauma is an ideal product for use in critical care trauma and emergency department treatment

Features:

- ★ Lightweight, compact and highly visible
- ★ Adjustable for all sizes
- ★ Quick opening package with complete easy-to-follow instructions
- ★ Unique Mechanical Advantage Pulley System provides quick universal compression of the pelvic region.
- ★ Simple, quick movement pull tab
